

CATEYE **FIT**

CC-PD100W Quick Start

START

Click the button and follow the instructions.

Thank you for purchasing our cyclocomputer CATEYE FIT.

This Quick Start Manual explains how to set up the computer and how to install the unit on your bicycle.

By following the setup procedure, CATEYE FIT is ready for use.

Before use, read the instruction manual that comes with the product thoroughly to the end to understand the functions of this unit, and to use it safely in a correct manner.

Next

This PDF contains a movie file.

When you click on the movie screen, a message regarding security appears. Click the “Trust in the text” or “Play” button to close the message.

Click the screen again to play the movie.

Measure the tire circumference (L) of your bicycle

Adjust the tire pressure properly. With the rider's weight applied on the bicycle, roll the wheel one tire revolution with reference to a marker such as the valve, and measure the travel distance on the ground.

Setting up the computer

How to measure the stride

The stride means the distance between adjacent tiptoes of your footprint. Mark at your tiptoe in the start point and the point after you make 10 steps, and then measure the distance between them.

* The stride becomes larger as you walk faster. For measurement, walk at a normal speed.
An average stride is determined by dividing the walking distance by 10 (number of steps).

Walking distance **A** / 10 (Number of steps) = Stride

Measure the tire circumference (L) of your bicycle

Adjust the tire pressure properly. With the rider's weight applied on the bicycle, roll the wheel one tire revolution with reference to a marker such as the valve, and measure the travel distance on the ground.

How to measure the stride

The stride means the distance between adjacent tiptoes of your footprint. Mark at your tiptoe in the start point and the point after you make 10 steps, and then measure the distance between them.

* The stride becomes larger as you walk faster. For measurement, walk at a normal speed.
An average stride is determined by dividing the walking distance by 10 (number of steps).

Walking distance **A** / 10 (Number of steps) = Stride
