CATEYE
MICRO Wireless

CYCLOCOMPUTER
CC-MC200W

⚡ **Before using the computer, please thoroughly read this manual and keep it for future reference.**

Please visit our website, where detailed instructions with movies are available and the instruction manual can be downloaded.

Warning / Caution

- Do not concentrate on the computer while riding. Ride safely!
- Install the magnet, sensor, and bracket securely. Check these periodically.
- If a child swallows a battery, consult a doctor immediately.
- Do not leave the computer in direct sunlight for a long period of time.
- Do not disassemble the computer.
- Do not drop the computer to avoid malfunction or damage.
- When using the computer installed on the bracket, change the **MODE** by pressing on the four dots below the screen, or by pressing on the **SSE** simultaneously, to start or stop the timer. Pressing hard on other areas may result in malfunction or damage to the computer.
- Be sure to tighten the dial of the FlexTight™ bracket by hand. Tightening it strongly using a tool, etc. may damage the screw thread.
- When cleaning the computer, bracket and sensor, do not use thinners, benzene, or alcohol.
- Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to local regulations.
- LCD screen may be distorted when viewed through polarized sunglass lenses.

Wireless Sensor

The sensor was designed to receive signals within a maximum range of 70 cm, to reduce chance of interference. When adjusting the wireless sensor, note the following:

- Signals cannot be received if the distance between the sensor and the computer is too large. The receiving distance may be shortened due to low temperature and exhausted batteries.
- Signals can be received only when the back of the computer is facing the sensor.

Interference may occur, resulting in incorrect data, if the computer is:
- Near a TV, PC, radio, motor, or in a car or train.
- Close to a railroad crossing, railway tracks, TV stations and/or radar base.
- Using with other wireless devices in close proximity.

Frequency Band : 19 kHz
Radiated Power : –31.7 dBm
Hereby, CATEYE Co., Ltd. declares that the radio equipment type CC-MC200W is in compliance with Directive 2014/53/EU.
The full text of the EU declaration of conformity is available at the following internet address :
cateye.com/doc

Canada 310
This device complies with Industry Canada's RSS-310. Operation is subject to the condition that this device must not cause harmful interference and must accept any interference, including interference that may cause undesired operation of the device.
Cet appareil est conforme au CNR-310 d'Industrie Canada. Son exploitation est autorisée à condition que l'appareil ne produise pas de brouillage préjudiciable et qu'il accepte tout brouillage, même celui susceptible d'en compromettre le fonctionnement.

Tire circumference

You can find the tire circumference (L) of your tire size in the chart below, or actually measure the tire circumference (L) of your bicycle.

* **How to measure the tire circumference (L)**
  For the most accurate measurement, do a wheel roll out. With the tires under proper pressure, place the valve stem at the bottom. Mark the spot on the floor and with the rider's weight on the bike, roll exactly one wheel revolution in a straight line (until the valve comes around again to the bottom). Mark where the valve stem is and measure the distance.

  L mm

* **Tire circumference reference table**
  * Generally, the tire size or ETRTO is indicated on the side of the tire.

ETRTO	Tire size	L (mm)	ETRTO	Tire size	L (mm)

Switching computer function

Pressing the **MODE** button switches the measurement data at the bottom in the order shown in the following figure.

Elapsed Time
0:00'00" – 9:59'59"

Trip Distance
0.00 – 999.99 km [mile]

Trip Distance-2
0.00 – 999.99 km [mile]

Stop watch (*2)
0:00'00 - 9:59'59"

Total Distance
0 – 99999 km[mile]

Maximum Speed
0.0 – 105.9 km/h
[0.0 – 65.0 mph]

Average Speed (*1)
0.0 – 105.9 km/h
[0.0 – 65.0 mph]

*1 When **Tm** about 10 hours, or **Dst** exceeds 999.99 km, **.E** will appear.
    Reset the data.
*2 It appears only in the auto mode.

MODE operation when the computer is mount-ed on the bracket

Click
MODE

Click
SSE+MODE

SSE

Starting / Stopping measurement

There are two measurement methods; manual mode and auto mode.

| Setting method | See "Changing the computer settings: Selecting the auto mode" (Page 7). |

The speed unit (**km/h** or **mph**) flashes during measurement.
* The maximum speed and total distance are updated regardless of start/stop of the measurement.

• **Auto mode (AT illuminated)**
  Measurements start automatically when the bicycle is in motion.

AT ON

START   STOP

• **Manual mode**
  Press the **SSE** button together with the unit to start/stop the measurement.

AT OFF

SSE+MODE   Starting/Stopping measurement

* When the computer is removed from the bracket, press the **SSE** button on the front and the **MODE** button on the back simultane-ously.

Resetting data

Pressing and holding **SSE** together with the unit on the measurement screen resets any measurement data, ex-cept the total distance (**Odo**), trip distance-2 (**Dst2**), and stopwatch (⏱).

* The total distance (**ODO**) is not reset.

SSE+MODE
(Press & hold)

• **Resetting separately the trip distance-2 and stop watch**
  To reset the currently displayed data, display trip distance 2 (**Dst2**) or the stopwatch(⏱), and hold down the main unit along with the **SSE**.

  * **How to reset the trip distance 2 (Dst2) and the stopwatch displayed in top row of screen**
    Display the current speed (**Spd**) in bottom row of screen and perform the reset operation.

Spd

Backlight (Night mode ⛷)

With the night mode turned on, pressing the **MODE** button turns on the backlight (for 5 seconds). Pressing any button while the backlight is still on extends the illumination for another 5 seconds.

OFF　　　　　　　　**ON**
| Setting method | Pressing and holding the **MODE** button proceeds to setting the night mode. Pressing and holding the button again turns on the night mode, and returns to the measurement screen. |

Measuring screen　　**MODE**　　Selecting the
　　　　　(Press & hold)　　night mode
　　　　　　　　　　　　screen
* The night mode is automatically turned off without any signal received for 10 minutes.
* You can switch ON/OFF also from the menu screen.
  See "Changing the computer settings: Setting the night mode" (Page 6).
* When 🔋 (battery icon) is turned on, the backlight is not turned on even if the night mode is on.

Setting the function to display

Displaying only selected data can be done.

Tm → Dst → Dst2 → Av
　　　　　　　　　↓
⏱ ← Odo ← Mx

Tm → Dst ────────→ Av
　　　　　　　　　↓
　　　　　　　　　Mx
| Setting method | See "Changing the computer settings: Setting the function" (Page 7). |

* The current speed (**Spd**), and the elapsed time (**Tm**) cannot be hidden.
* When you hide the function assigned to the top display, the upper display returns to the current speed (**Spd**).
* The unit keeps recording hidden data on background and each measurement data is updated when displayed (except for the stop watch).
Stop watch ⏱

The time can be measured regardless of start/stop of the measurement. It can be used when the auto mode is on (AT illuminated).

* **Start/Stop** : Press the **SSE** button together with the unit. ⏱ flashes during measurement.
* **Reset** : Display the stopwatch (⏱), and hold down the main unit along with the **SSE** button.
  * **How to reset the trip distance 2 (Dst2) and the stopwatch displayed in top row of screen**
    Display the current speed (**Spd**) in bottom row of screen and perform the reset operation.

AT ON

Starting/Stopping measurement

SSE+MODE
Upper display selection

Any data can be selected for the top display, and constantly be displayed.

| Setting method | See "Changing the computer settings: Setting the upper display" (Page 6). |

* The stopwatch cannot be set when the auto-mode is off.

Power-saving function

If the computer has not received a signal for 10 minutes, power-saving screen will activate and only the clock will be displayed. When you press **MODE**, or the computer receives a sensor signal, the measuring screen reappears.

Power-saving screen

🕐 10 minutes

🕐 12 hours

Sleep
MODE

* If another 12 hours of inactivity elapses in the power-saving screen, only the speed unit is displayed on the screen. With such a screen, pressing the **MODE** button returns to the measurement screen.

Pressing **MENU** on the measurement screen changes to the menu screen. Various settings can be changed on the menu screen.

* After changes are made, be sure to register the setting(s) by pressing the **MENU** button.
* Leaving the menu screen without any operation for 1 minutes returns to the measurement screen, and changes are not saved.

Maintenance

To clean the computer or accessories, use diluted neutral detergent on a soft cloth, and wipe it off with a dry cloth.

Replacing the battery

Computer

When 🔋 (battery icon) is turned on, replace the battery. Install a new lithium battery(CR2032) with the (+) side facing upward.

* After replacing the computer battery, follow the procedure described in "Preparing the computer" (Page 3).
Close

COIN

Open — CR2032
Sensor

When the speed is not displayed even after adjusting correctly, replace the battery.

Insert new lithium batteries (CR2032) with the (+) sign upward, and close the battery cover firmly.

* After replacement, check the positions of the sensor and magnet.

CR2032

Close

Open

COIN

Troubleshooting

The sensor signal icon does not flash (the speed is not displayed).
(Move the computer near the sensor, and turn the front wheel. If the sensor signal icon flashes, this trouble may be a matter of transmission distance due to battery drain, but not any malfunction.)

Check that the clearance between the sensor and magnet is not too large. (Clearance: within 5 mm)

Check that the magnet passes through the sensor zone correctly.

Adjust the positions of the magnet and sensor.

Is the computer installed at the correct angle?

Back of computer must face toward the sensor.

Check that the distance between the computer and sensor is correct. (Distance: within 20 to 70 cm)

Install the sensor within the specified range.

Is the computer or sensor battery weak ?
In winter, battery performance diminishes.

Replace with new batteries according to the procedure specified in the section "Replacing the battery".
Nothing is displayed by pressing the button.

Replace the computer battery according to the procedure specified in the section "Replacing the battery".

Incorrect data appear.

Clear all according to the procedure described in "Preparing the computer" (Page 3).

The backlight is not turned on.

Check if 🔋 (battery icon) is turned on.

Replace the computer battery according to the procedure specified in the section "Replacing the battery".

Specification

| Battery / Battery life | Computer : | Lithium battery (CR2032) x 1 / Approx. 1 years (If the computer is used for 1 hour/day; the battery life will vary depending on the conditions of use.) |
| | Sensor : | Lithium battery (CR2032) x 1 / Unit Total Distance reaches about 10000 km (6250 mile) |

* It may be shortened significantly when backlight is used frequently.
* This is the average figure of being used under 20 °C temperature and the distance between the computer and the sensor is 65 cm.
* The factory-loaded battery life might be shorter than the above-mentioned specification.

Controller	4 bit, 1-chip microcomputer (Crystal controlled oscillator)
Display	Liquid crystal display
Sensor	No contact magnetic sensor
Transmission distance	Between 20 and 70 cm
Tire circumference range	0100 mm - 3999 mm (Initial value: A = 2096 mm, B = 2050 mm)
Working temperature	0 °F - 104 °F (0 °C - 40 °C) (This product will not display appropriately when exceeding the Working Temperature range. Slow response or black LCD at lower or higher temperature may happen respectively.)
Dimensions/weight	Computer :	2-7/64" x 1-27/64" x 11/16" (53.5 x 36 x 17.5 mm) / 0.92 oz (26 g)
	Sensor :	1-41/64" x 1-27/64" x 19/32" (41.5 x 36 x 15 mm) / 0.53 oz (15 g)

* The specifications and design are subject to change without notice.

Limited warranty

2-Year Computer/Sensor only
(Accessories and Battery Consumption excluded)
CatEye cycle computers are warranted to be free of defects from materials and workmanship for a period of two years from original purchase. If the product fails to work due to normal use, CatEye will repair or replace the defect at no charge. Service must be performed by CatEye or an authorized retailer. To return the product, pack it carefully and enclose the warranty certificate (proof of purchase) with instruction for repair. Please write or type your name and address clearly on the warranty certificate. Insurance, handling and transportation charges to CatEye shall be borne by person desiring service.
For UK and REPUBLIC OF IRELAND consumers, please return to the place of purchase. This does not affect your statutory rights.
